Machinecoin

GUIDE: HOW TO USE THE MACHINECOIN ANDROID APP RIGHT

With this Guide you should learn how to use the Machinecoin Android App right. Please take the time that is necessary to read the complete guide and do not use the app before you have done this.

We also suggest you not to use the app for huge amounts of Machinecoins. Therefore the Machinecoin-Daemon or the Machinecoin-Wallet is a way much better. See this app as an opportunity to take some "pocket money" with you.

1. Download

Download the Machinecoin Android App from an officially provided Android App Store or if you are a beta tester you can also download it from an official download link that you may have received from an official Machinecoin authority.
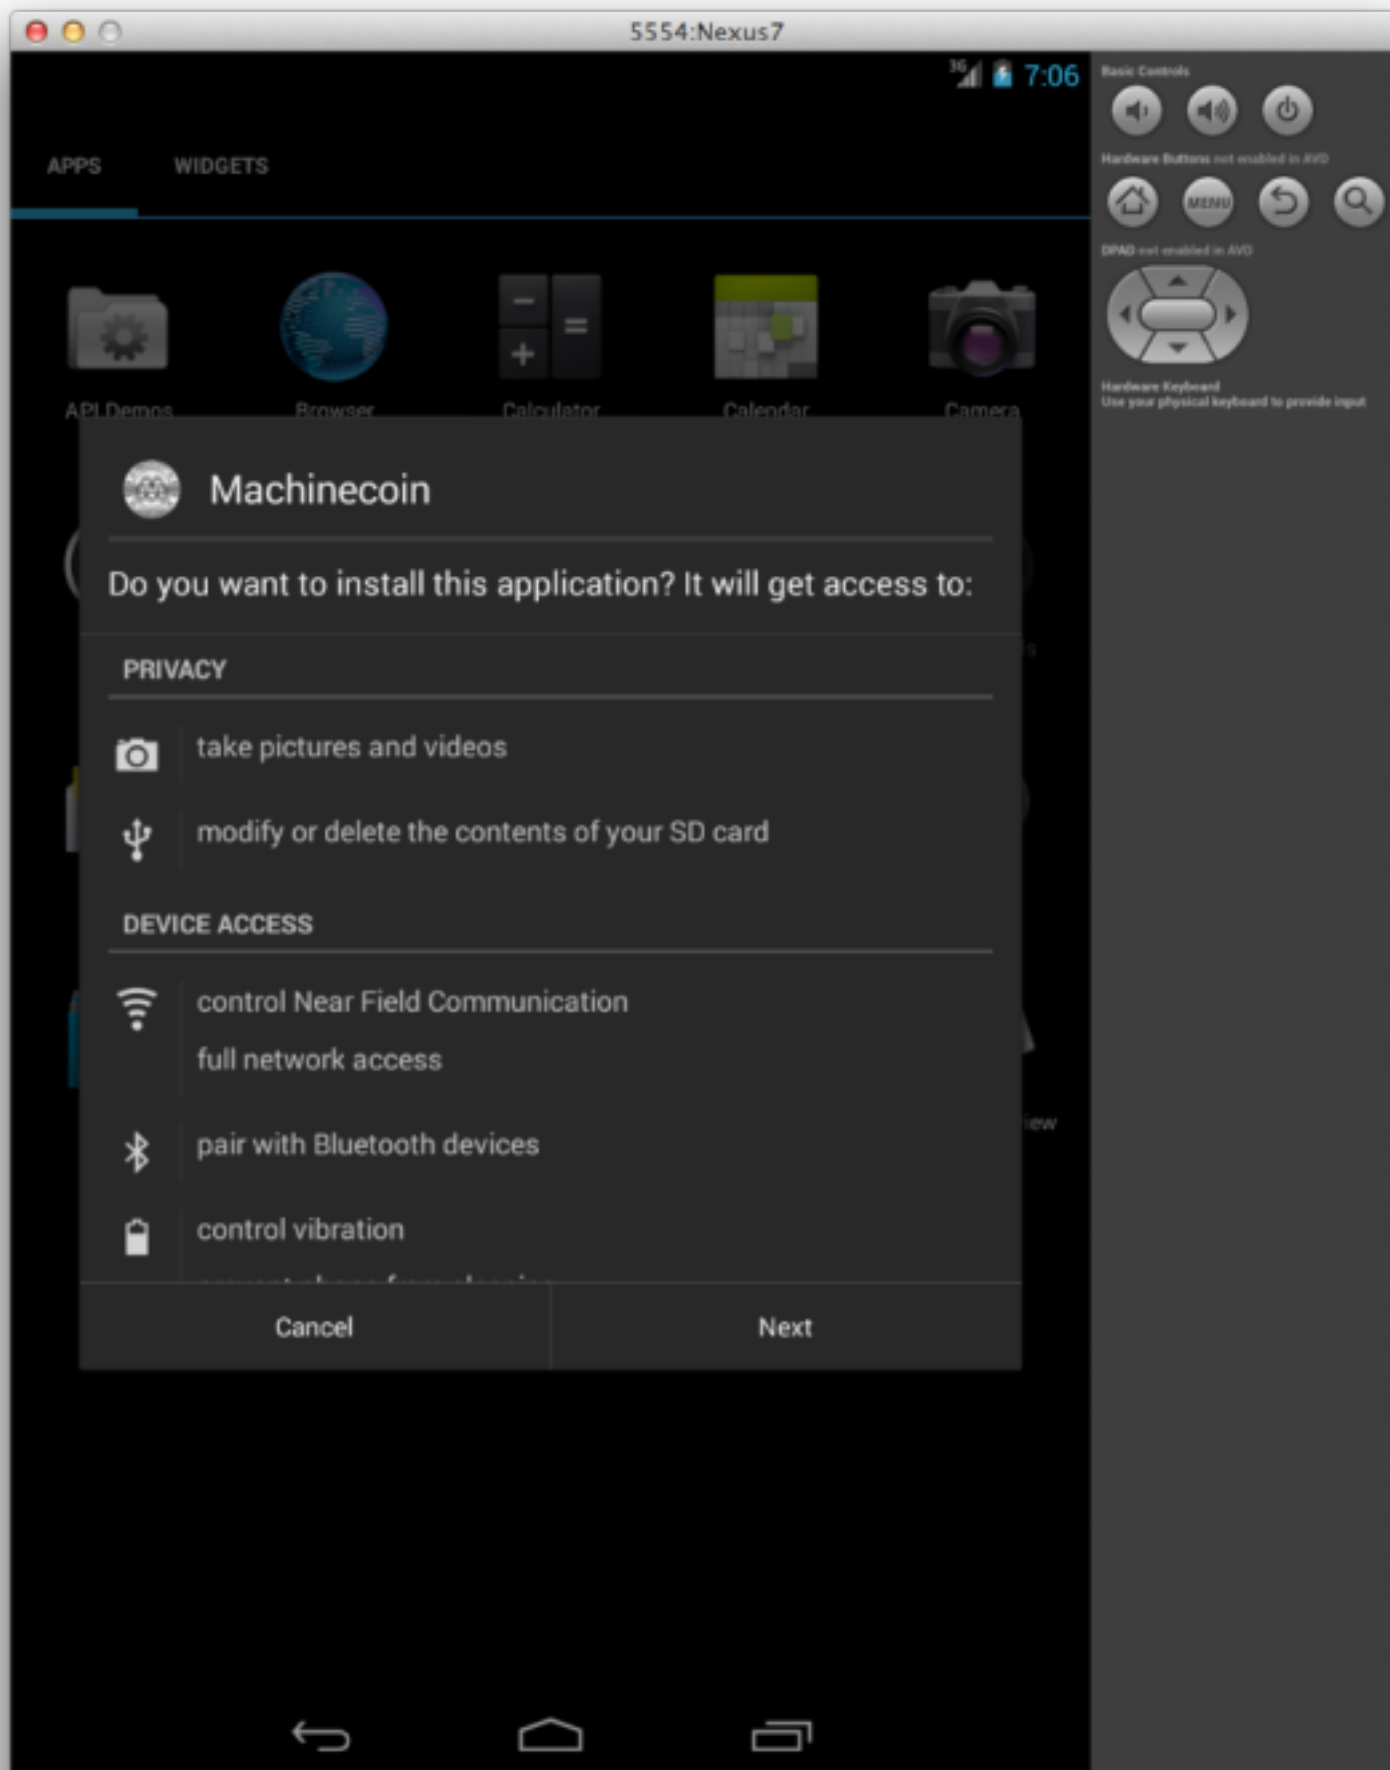

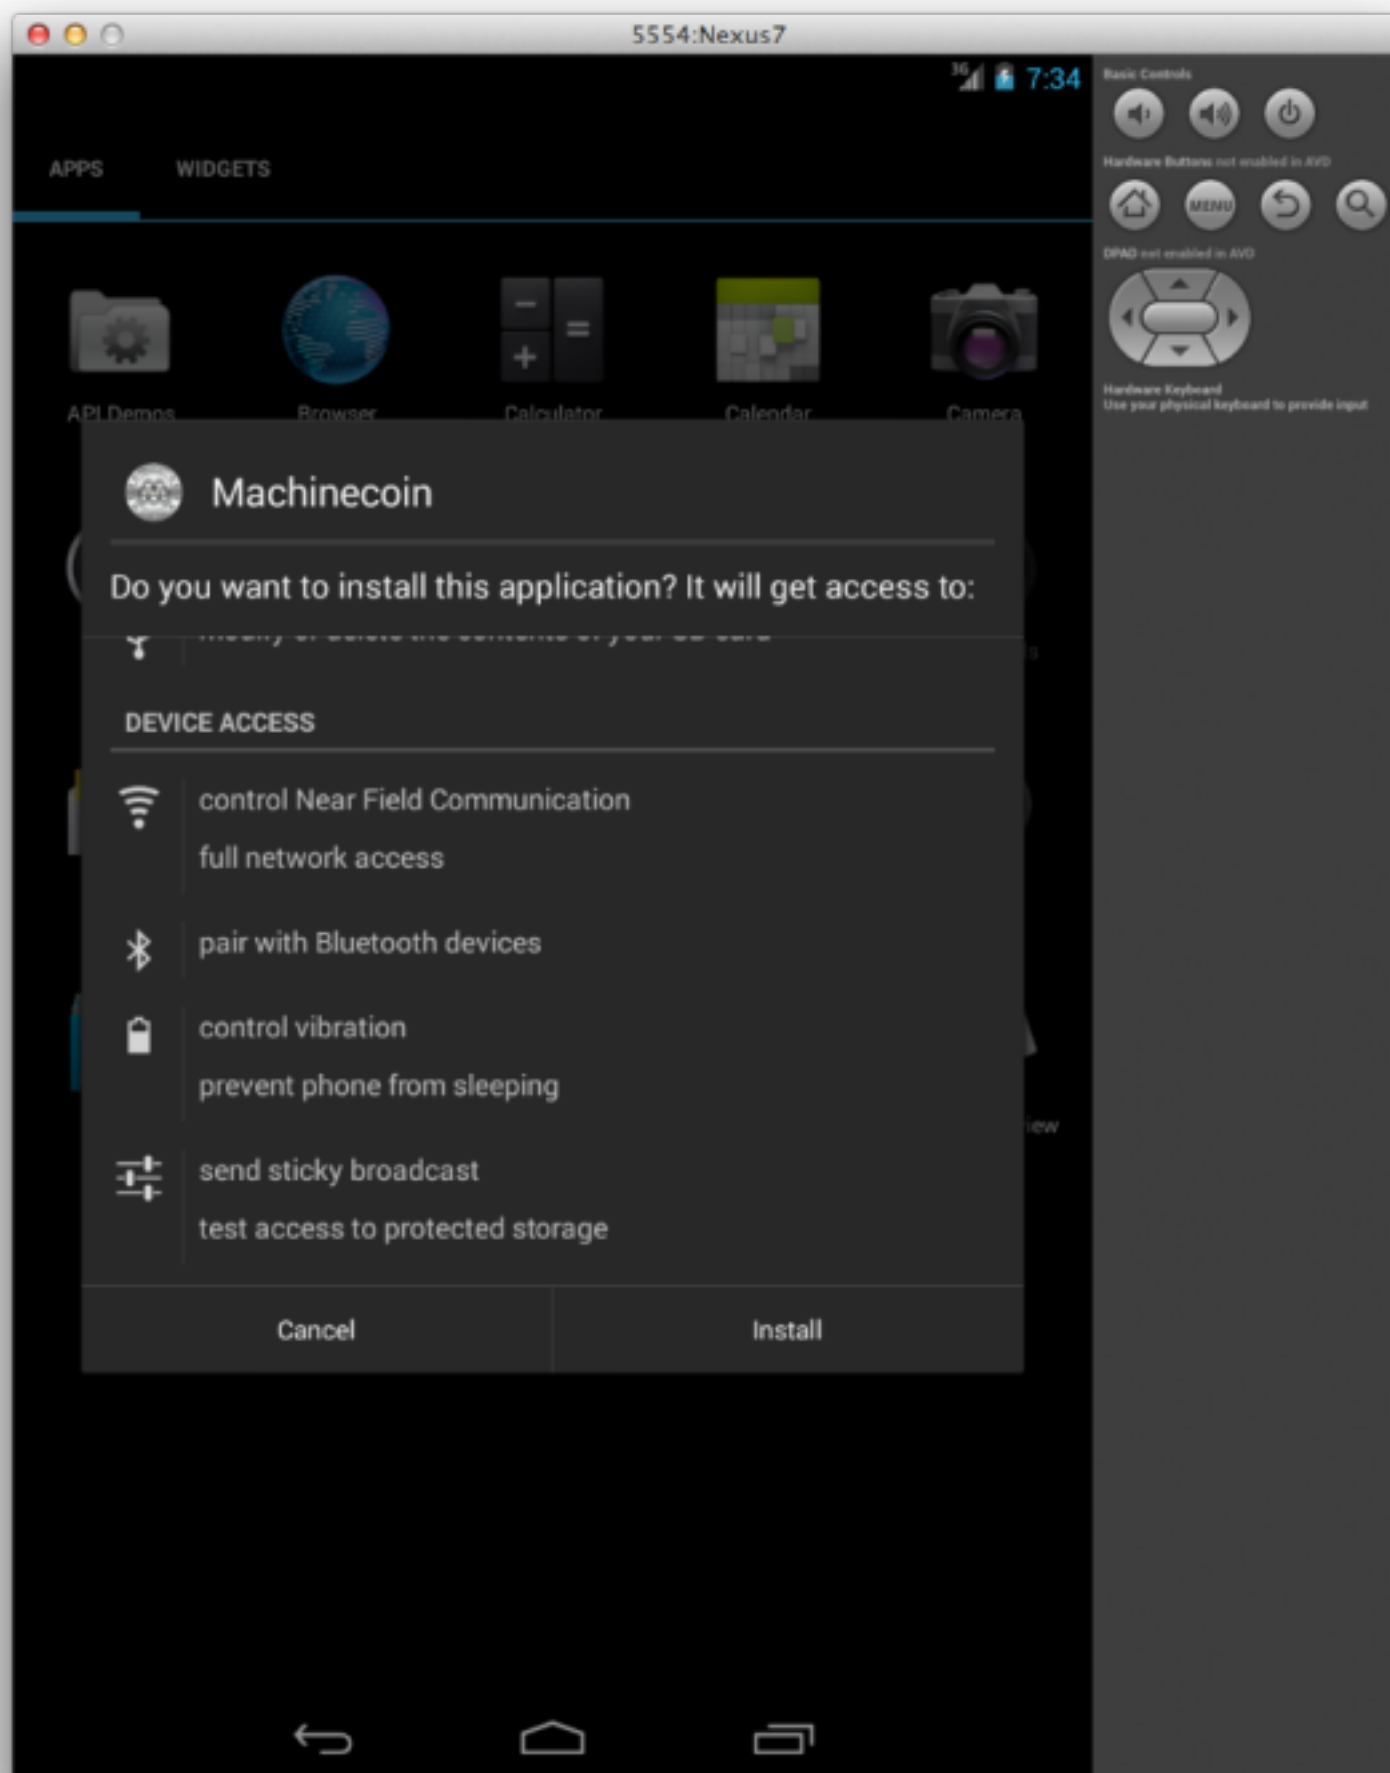

2. Installation

## 2.1) If you already have an older version installed.

Please backup your keys at first! Use the build in functions of the app to do that and keep your keys save at a secure place just like an external hard drive or in a cloud like MEGA. Only if you have successfully created a backup you should uninstall the app and continue with 2.2)

2.2) If you install the first time or you don't have got an older version installed.

If you have manually downloaded the .apk-file of the app you should now open it. If you have used an Android App Store to download the app this should not be necessary and the setup process should start automatically. At first you'll see a list of rights that the app needs to function. To continue to the next step you'll need to click on "Next" and then on "Install". If the installation succeeded you'll see a message "App installed" at the end of the step.

3. Start

After you have installed the app you were able to click on either "Done" or "Open". If you have clicked on "Done" in the step before you should now start the app by clicking on the Machinecoin app icon right on your dashboard. If you have clicked on "Open" the app should already have started and you should see the app.
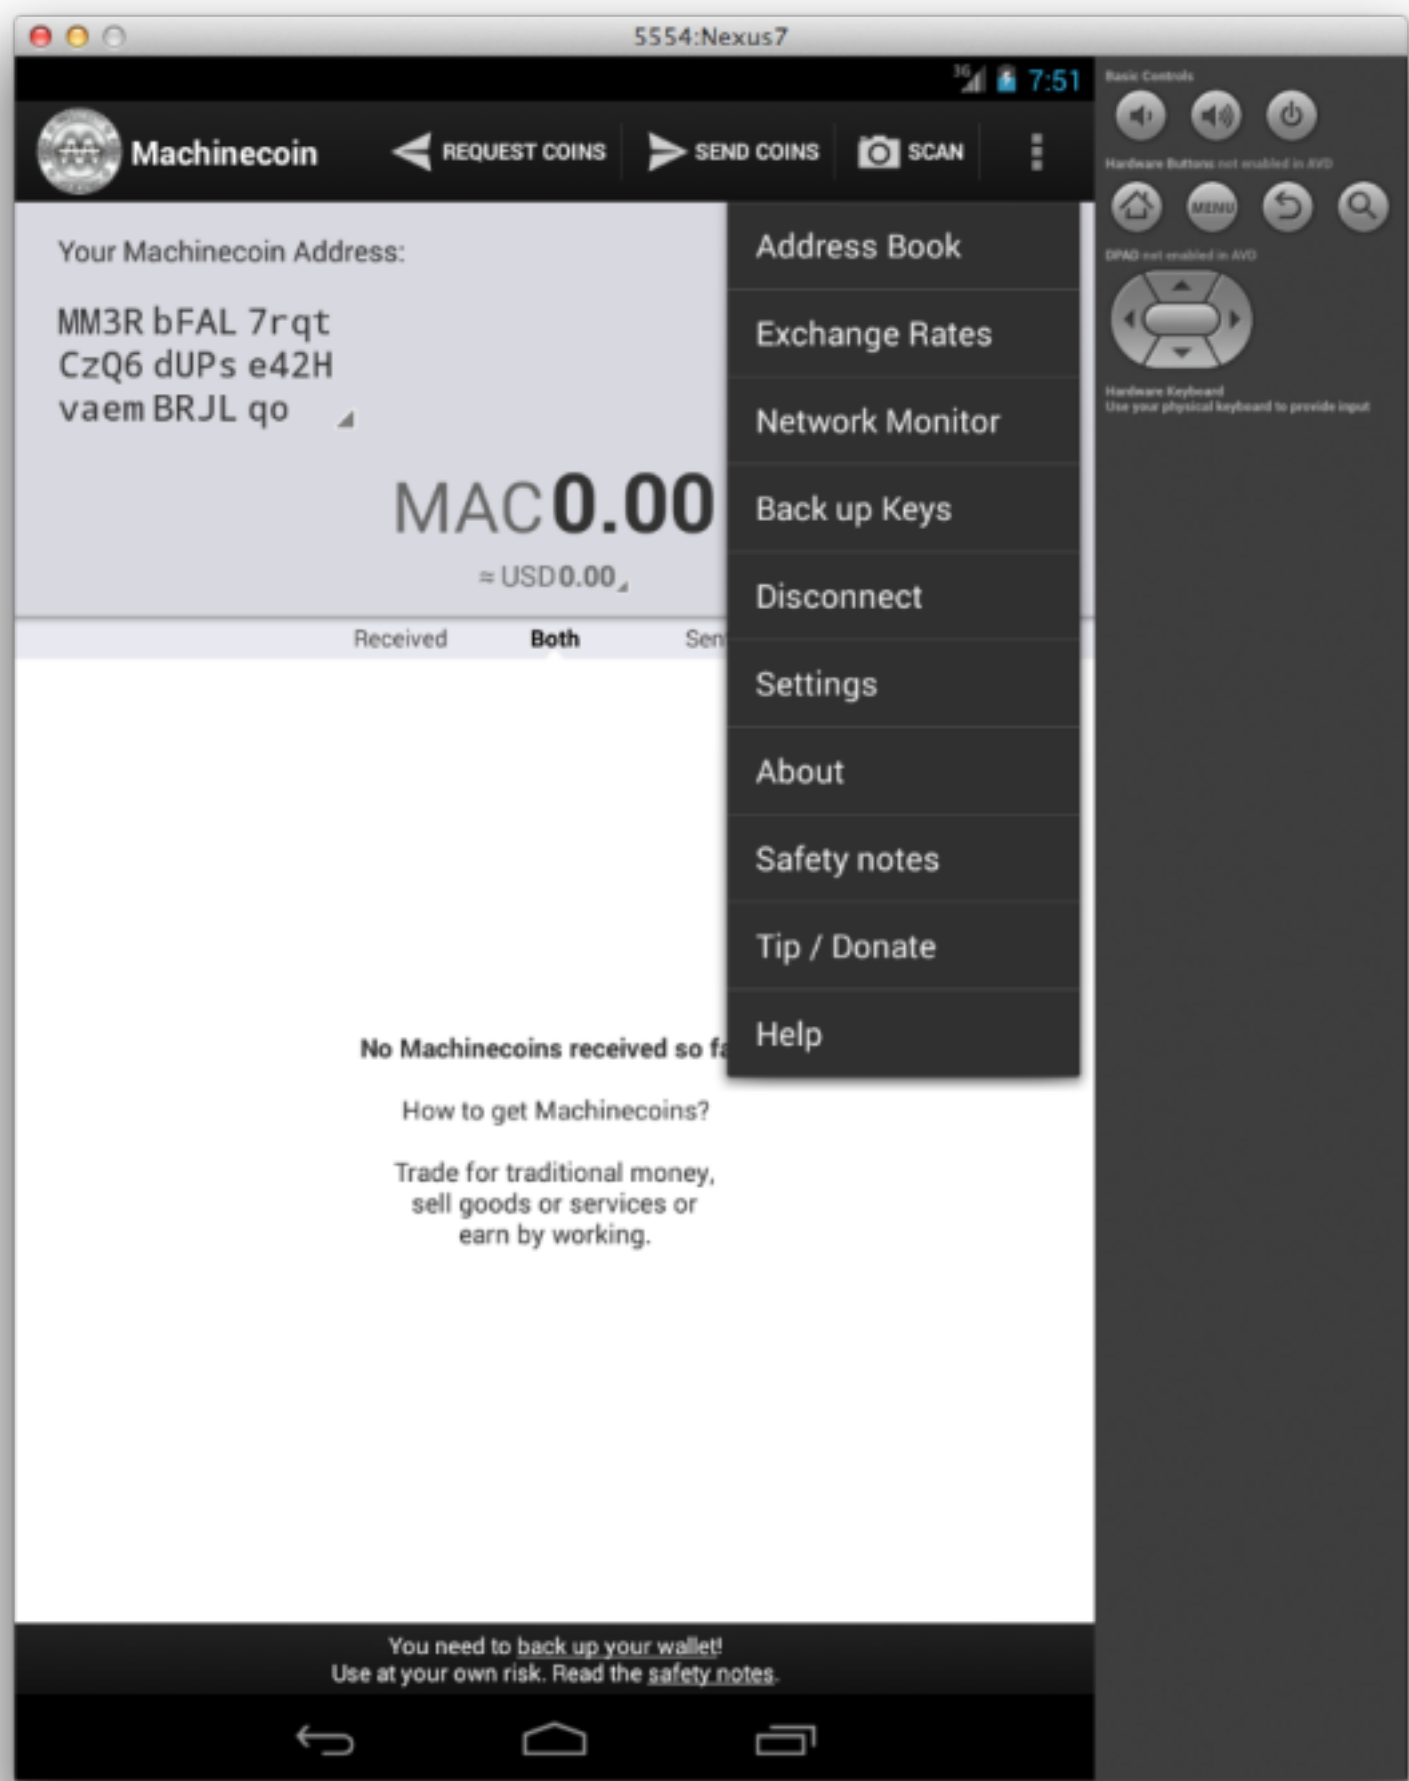

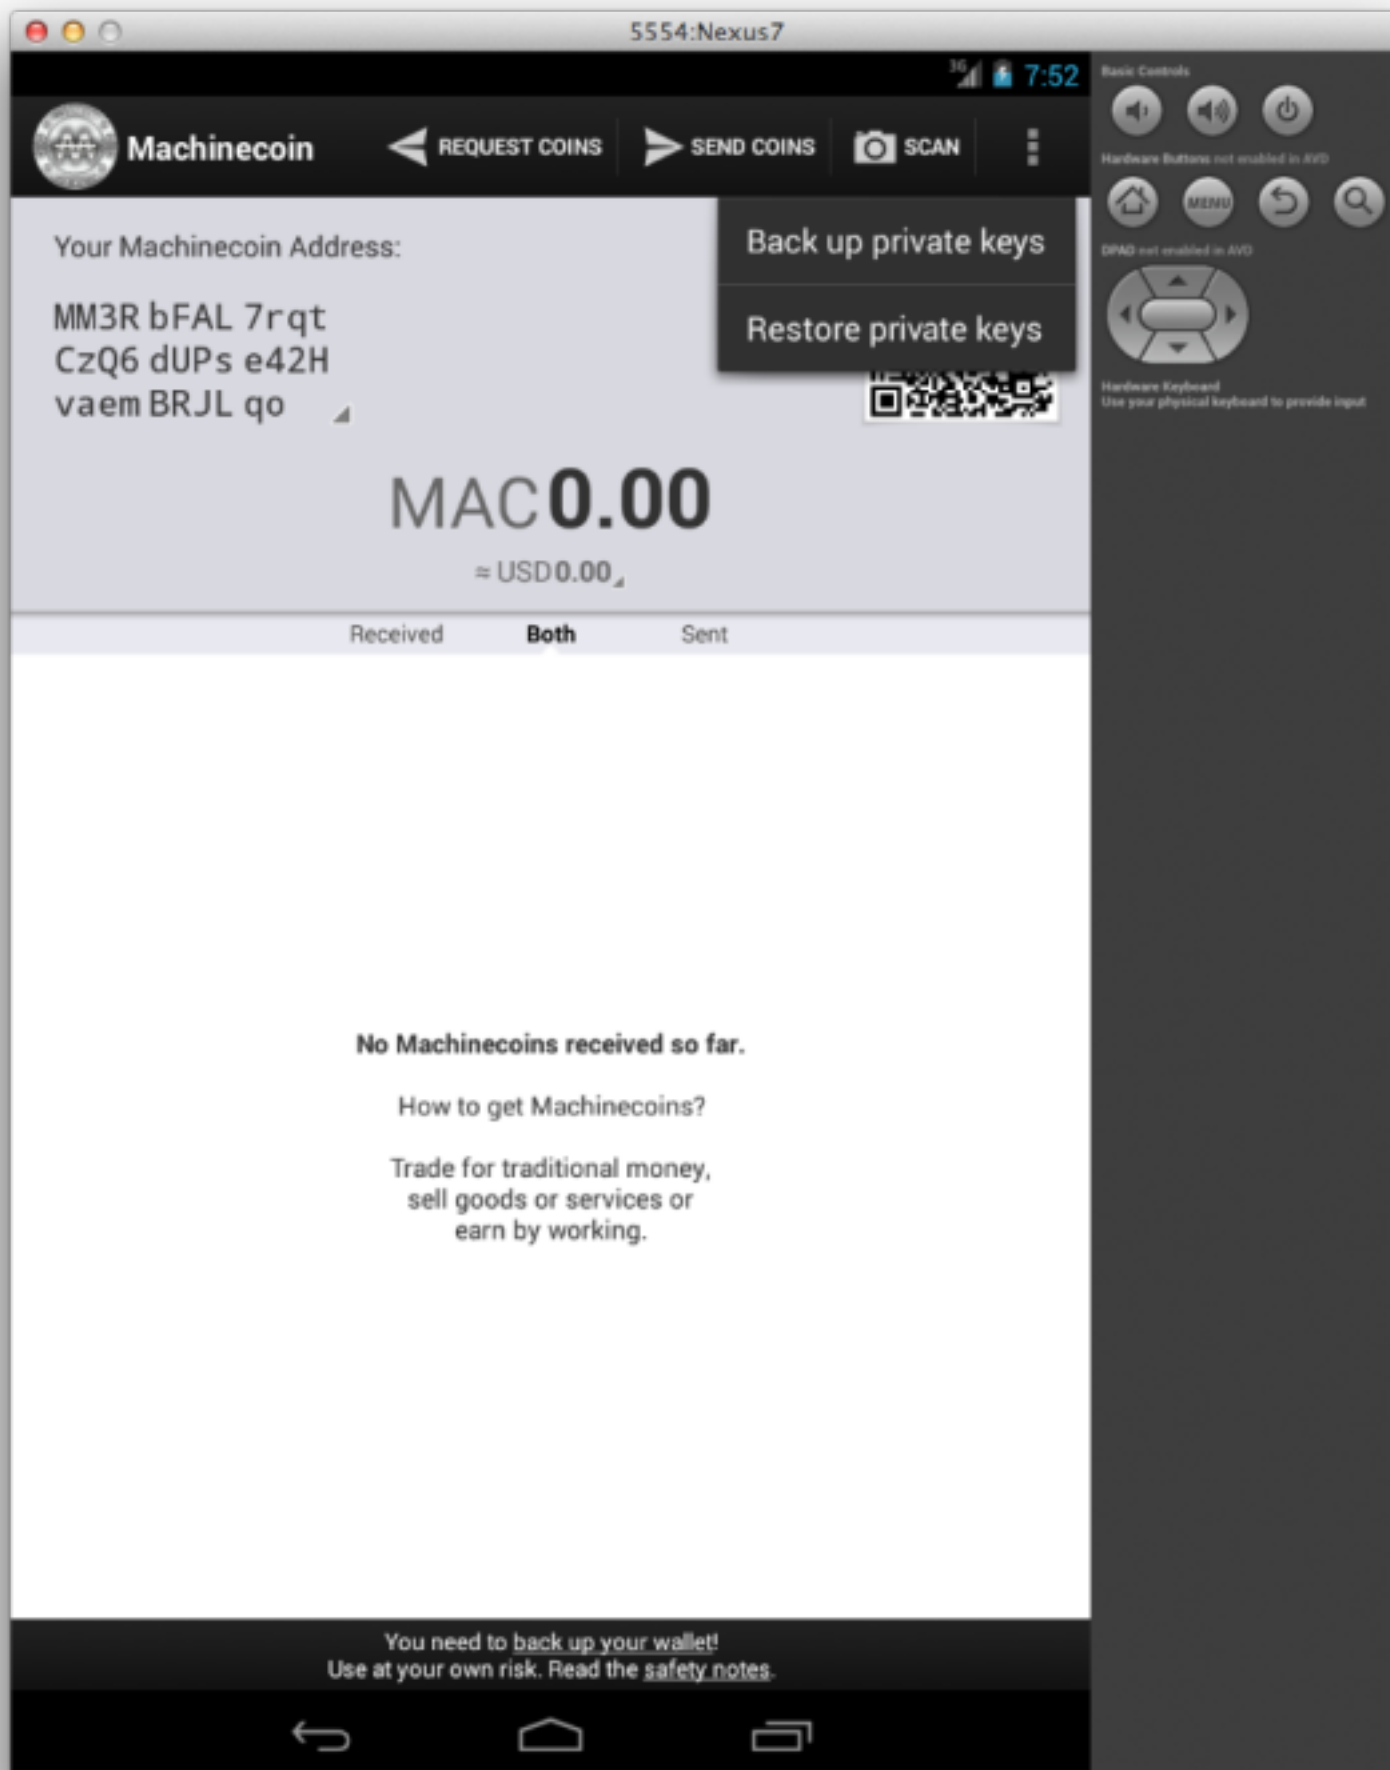

4. Backup and restore keys

At this point we usually would explain all the core functions that the app has. But: because its really important to prevent data loss and therefore the loss of Machinecoins you should at first learn and understand how to continually create backups of your keys and how to restore them again. Just to mention at this point: the backups of the app are yet not compatible with the backups of the Machinecoin-Daemon or the Machinecoin-Qt. So whenever you backup something with the app then restore it with the app and if you backup something with the Machinecoin-Daemon or
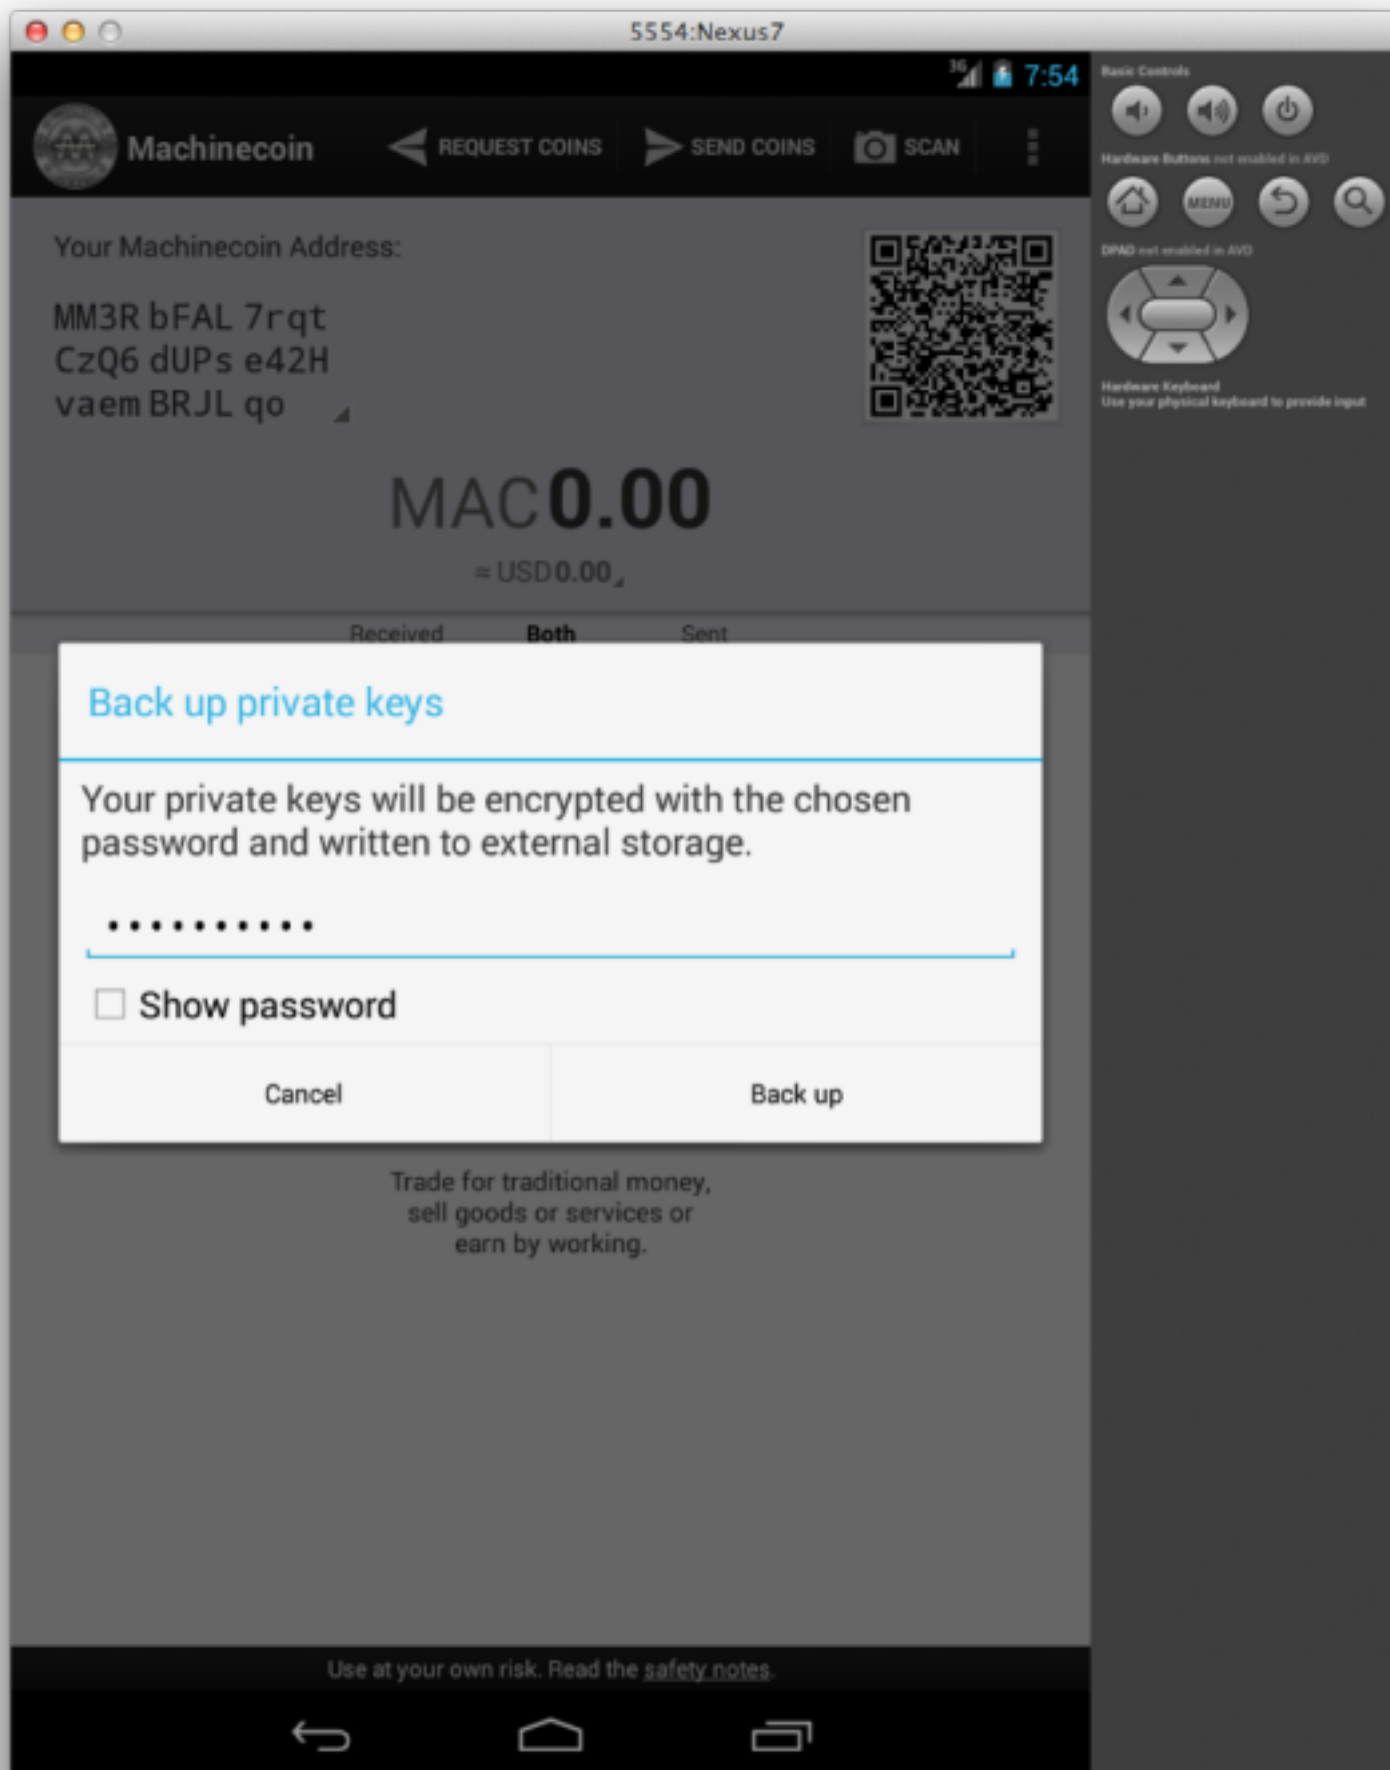

the Machinecoin-Qt then restore it with the Machinecoin-Daemon or the Machinecoin-Qt.
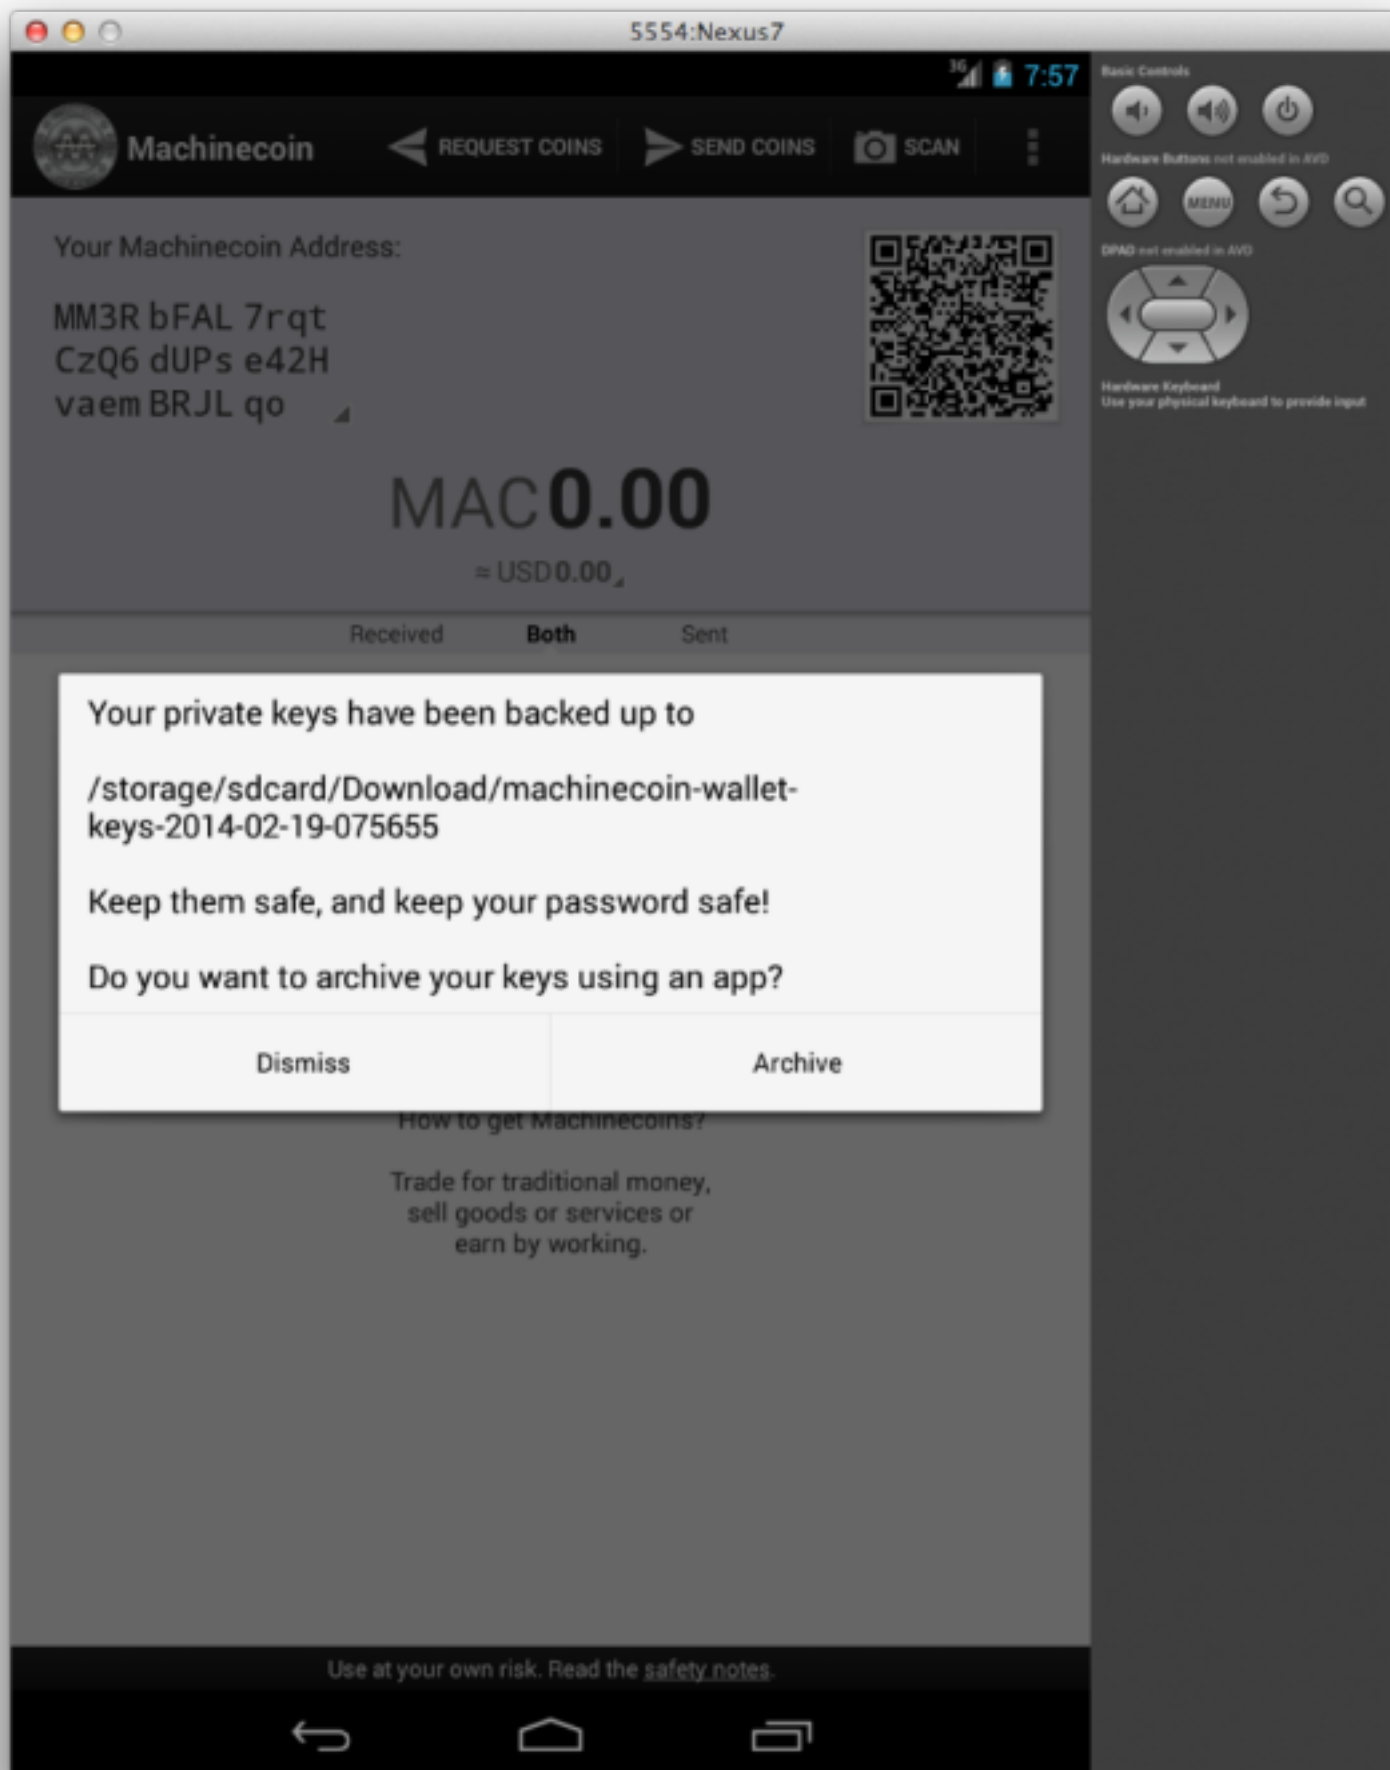

4.1 Backup keys

Click in the menu at first on "Back up keys". Right after that choose "Back up private keys". After that enter a password that you won't ever forget. Then click on "Backup" and you'll be asked if you not just want to store the keys locally on your external storage but also using an archive app just like MEGA.

4.2 Restore keys

Given a backup that was created with the app you are able to restore your keys up to the point the backup was created. To do this click in the menu at first on "Back up keys". Then choose "Restore private keys". In the following menu click on the select field of available backups. Choose the one you would like to restore, enter the password with which it was encrypted and click on "Restore". After your blockchain was successfully resetted you should open the app again and your private keys should be restored. As because the app has to be synced again then it will take a while to see
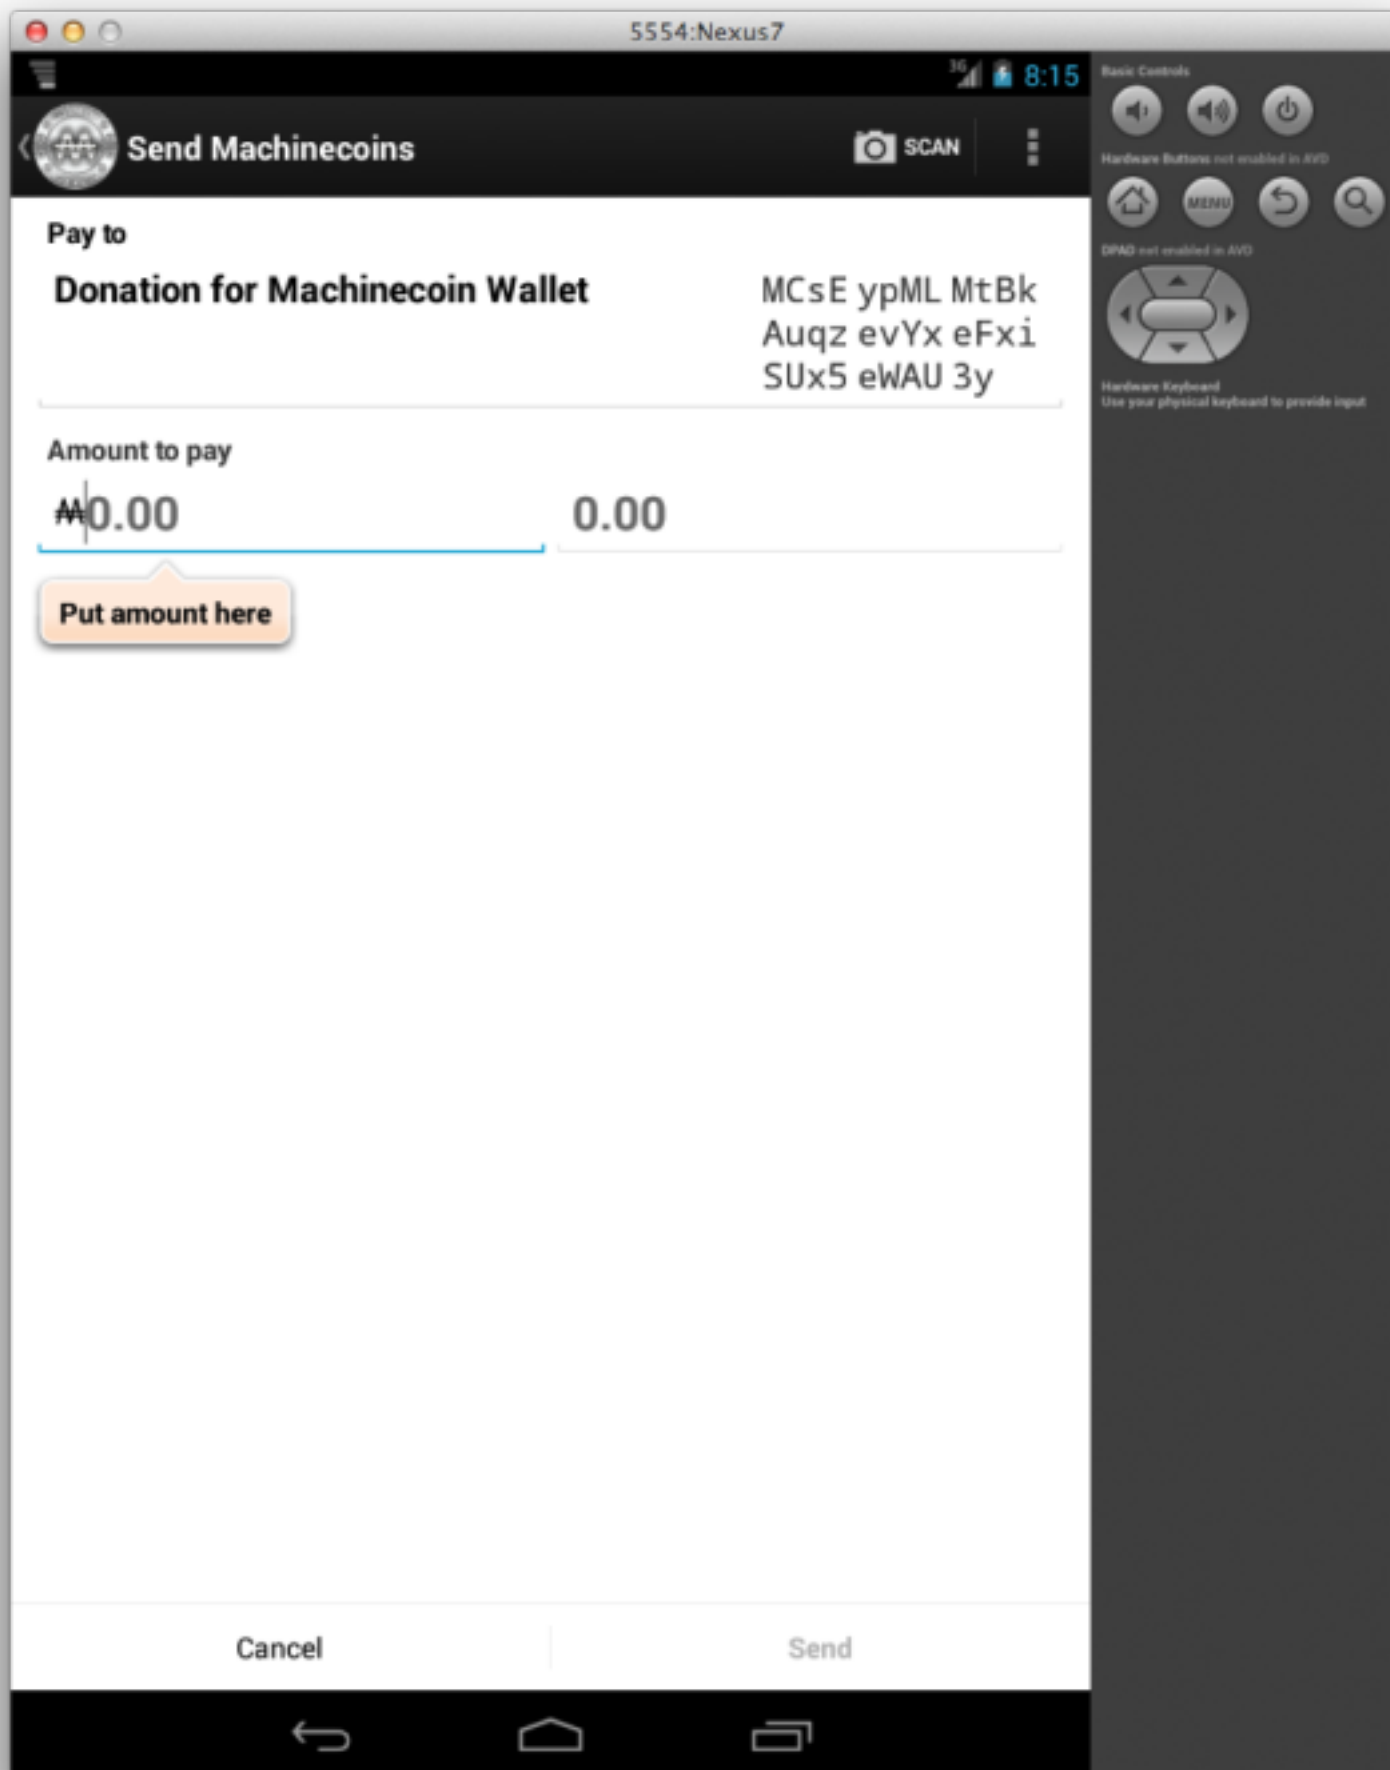

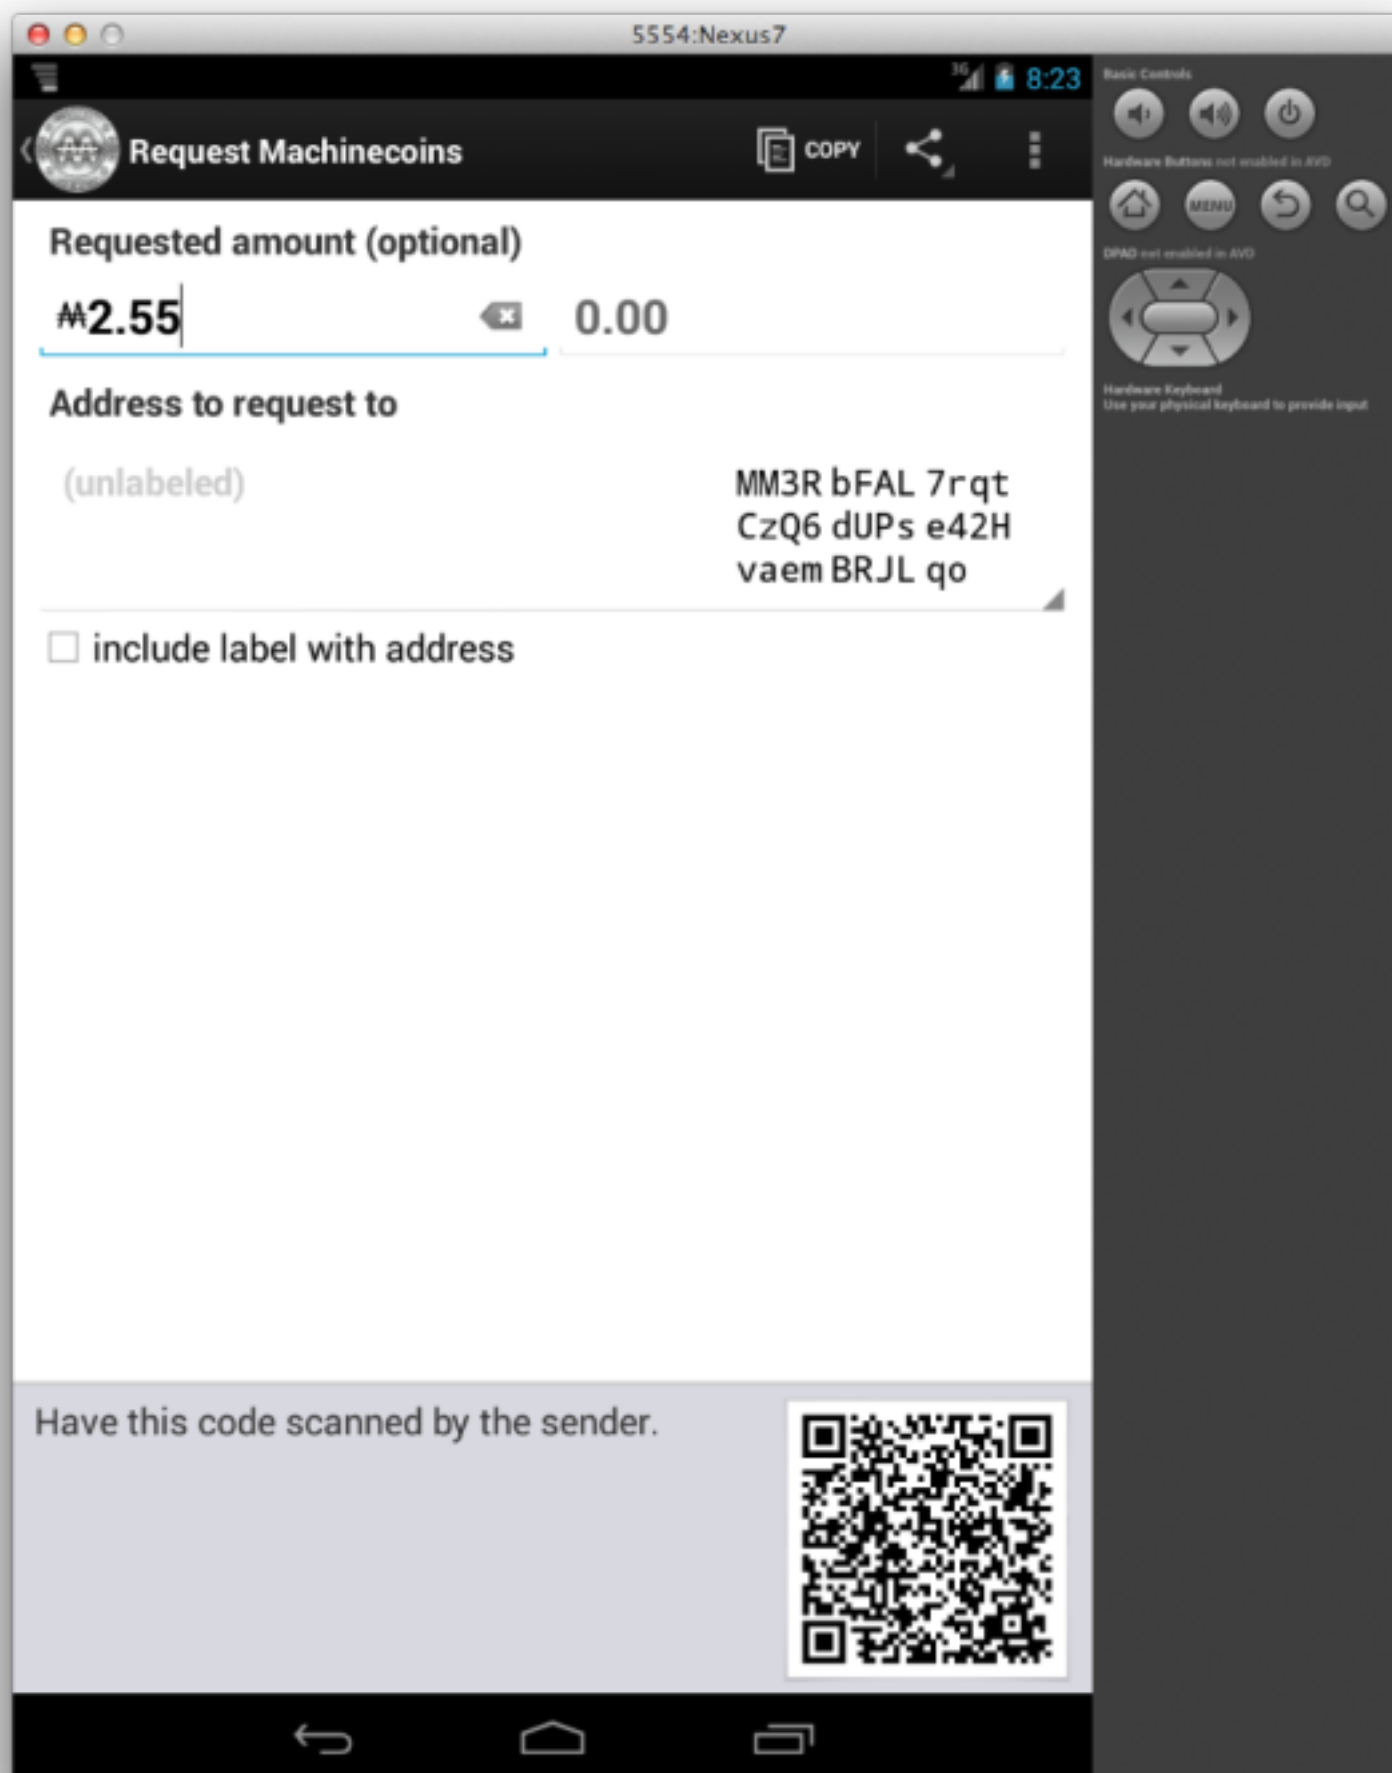

your credits.

5. Send Machinecoins

Click on "Send Coins" and enter all the required informations for a correct transaction like the Machinecoin address of the receiver and the amount and then click on "Send". Confirm your transaction and it will then sync with the blockchain which can take a while because it also depends on the number of connected peers.

6. Receive Machinecoins

Click on "Request Coins" and enter all the required informations for a correct transaction like one of your Machinecoin addresses and the amount. The sender now can scan the provided QR-code with his own Machinecoin Android App or you can send him the transaction details by email/sms using the symbols at the top of the menu.

7. Have fun

We don't want you to read long and boring instructions. Therefore we will stop here and you can explore the rest of the app by yourself. At the end we just want you to keep in mind:

- Always make local and/or remote backups of your private keys.
- Never forget the passwords of the backups that you have made.
- Don't store a lot of Machinecoins inside the app. Just as much as you would call it "pocket mon-

ey".

- If you ever got any problems with the app have a look at the forum or contact us via broad-ster/socialiter.
- If you like the app we appreciate your donations very much. Under "Tip/Donate" in the menu you can directly send us some Machinecoins.
